

# Tuesday!

## Part 7: FARM Program 4.0 – Auto-Enroll

A quick way to ensure that animals will be enrolled on a protocol based upon a certain event is to set up the Auto-Enroll process.

1. Select **File** and then **Protocols**.
2. Click the **Auto Enroll/Terminate** tab.
3. Select the procedure from the drop down menu that you want to connect with a protocol. In this example we use P2 Dried.
4. Select the Protocol that you want the cows automatically enrolled in for this procedure from the list on the left. In this example we want the cows to be enrolled in the **DryOffS** or **Dry Off SpectraMast DC** protocol when they are reported dry.
5. Click **Add to Enroll List** to move the protocol to the auto enroll box.
6. If there are any protocols that you want to make sure a cow is not enrolled in, select the protocol from the left and click on **Add to Terminate List**. In this example we want to make sure we don't trim any feet when the cow is dry.

*Notice there is no Save button. As soon as the Add button is selected the protocol is added to the list on the right and saved.*

When the dry procedure is recorded on the animal (Input Desk > Dried > Cow #) the input screen will now indicate that a protocol will automatically be enrolled for that cow.
